We are fully aware of the nature of our activities, for that reason, we ensure that in each of the projects our ideals prevail as:

- Leaders in the development of sustainable architectural projects that contribute to improving the living conditions of the population with scarce economic resources in Colombia.

- Effective consultants on planning architectural and urbanistic issues (regulations, procedures, management, responsible agents, etc.).

- Strategic allies of government agencies to develop social policies that relate to the mission and goals of our organization.

- Agents on promotion of social development and improving living conditions through the responsible development of our projects and programs.

Likewise, each of our efforts will be guided under the following specific objectives:

- Create architectural designs to improve community spaces, bringing the design to those without access to it.

Objectives and Scope

- Engage effectively the community that benefits from our programs at all stages to be developed by building participation mechanisms.

- Contribute to the access of information about current political issues, policy and planning on architectural and urbanistic issues, through the generation and distribution of documents and research and activating a communication channel on which information about our ideas are useful knowledge to society.

- Implement and maintain programs of national and international cooperation.
